

Failed unpause update of realtime queue member

Tuesday, February 23, 2016 8:18 AM

Asterisk version 11.21.2 (latest version) is giving the following highlighted errors. As a result the flag in my realtime queue member table is not correct. I do not get these errors in 11.6-cert8 version, nor have I gotten them with Asterisk 10 in the past 2 years.

We do use MS SQL server for our database. Something may have changed that it doesn't like.

My thoughts are that the parameter "uniqueid" is not being set correctly, (maybe trying to be obtained by a SQL query that MSSQL does not like). I personal lost the trail on finding the SQL statement call to get the "uniqueid" myself.

Asterisk 11.21.2
